# Contents

1. Development of products with affecting experience
2. Devisal process of the *AIM*
3. How to use the *AIM*
4. Effects of the *AIM* and its future

# 1. Development of products with affecting experience

## 1. Development of products with affecting experience

# Background in the development of products with affecting experience

Systematization of planning process  
to develop products with affecting experience

## 1. Development of products with affecting experience

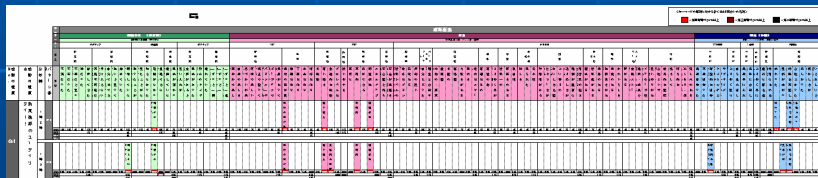

# Facing problems in the development of products with affecting experience

1. Themes for brainstorming tends to be vague.
2. “Affecting experiences” for users are hard to be defined.
3. “Affecting experiences,” which are built in an idea, are hard to be focused on in subsequent development process.

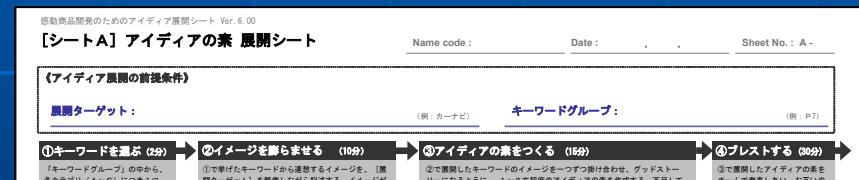

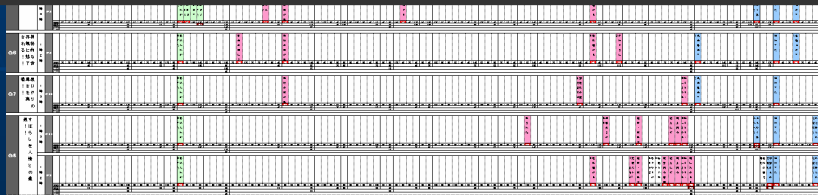

# 1. Development of products with affecting experience

## AIM, an idea generation support tool for products with affecting experience

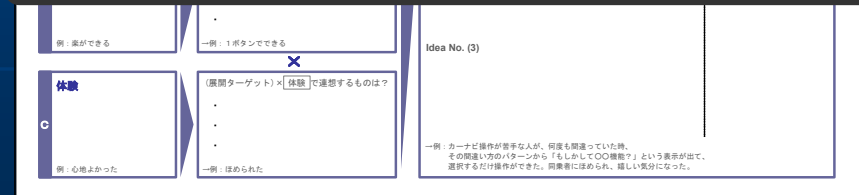

AIM, the acronym for *Associative Idea Map*, is a tool to *aim* at generating affecting experience.

Keyword sheet

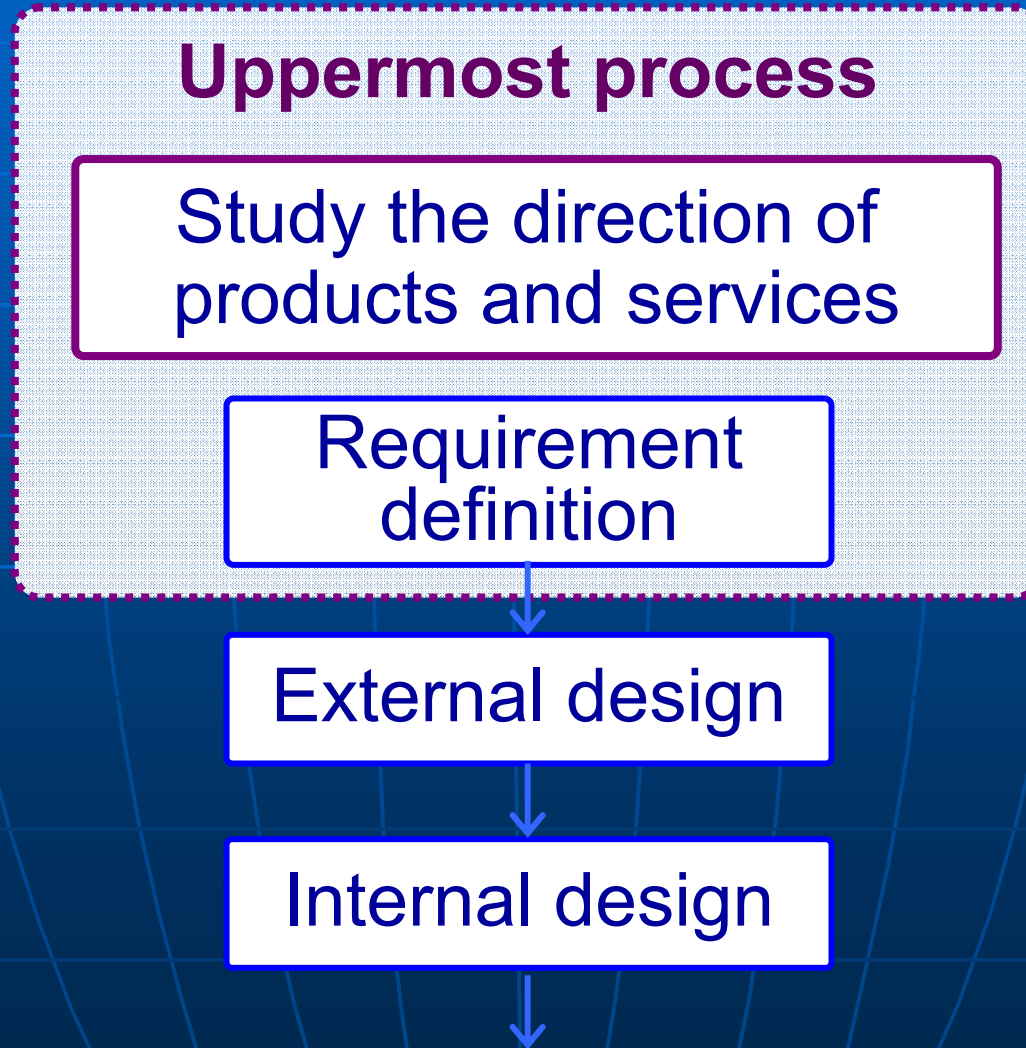

Idea expansion sheet

1. Development of products with affecting experience

# Scope of application of the *AIM* in development process

## 2. Devisal process of the *AIM*

## Devisal process of the *AIM*

Modeling of affecting experience mechanism

Elaboration of affecting experience elements

Selecting combinations of elaborated keywords that are prone to be affected

*AIM*

## 2. Devisal process of the AIM

# Devisal process of the *AIM*

Modeling of affecting experience mechanism

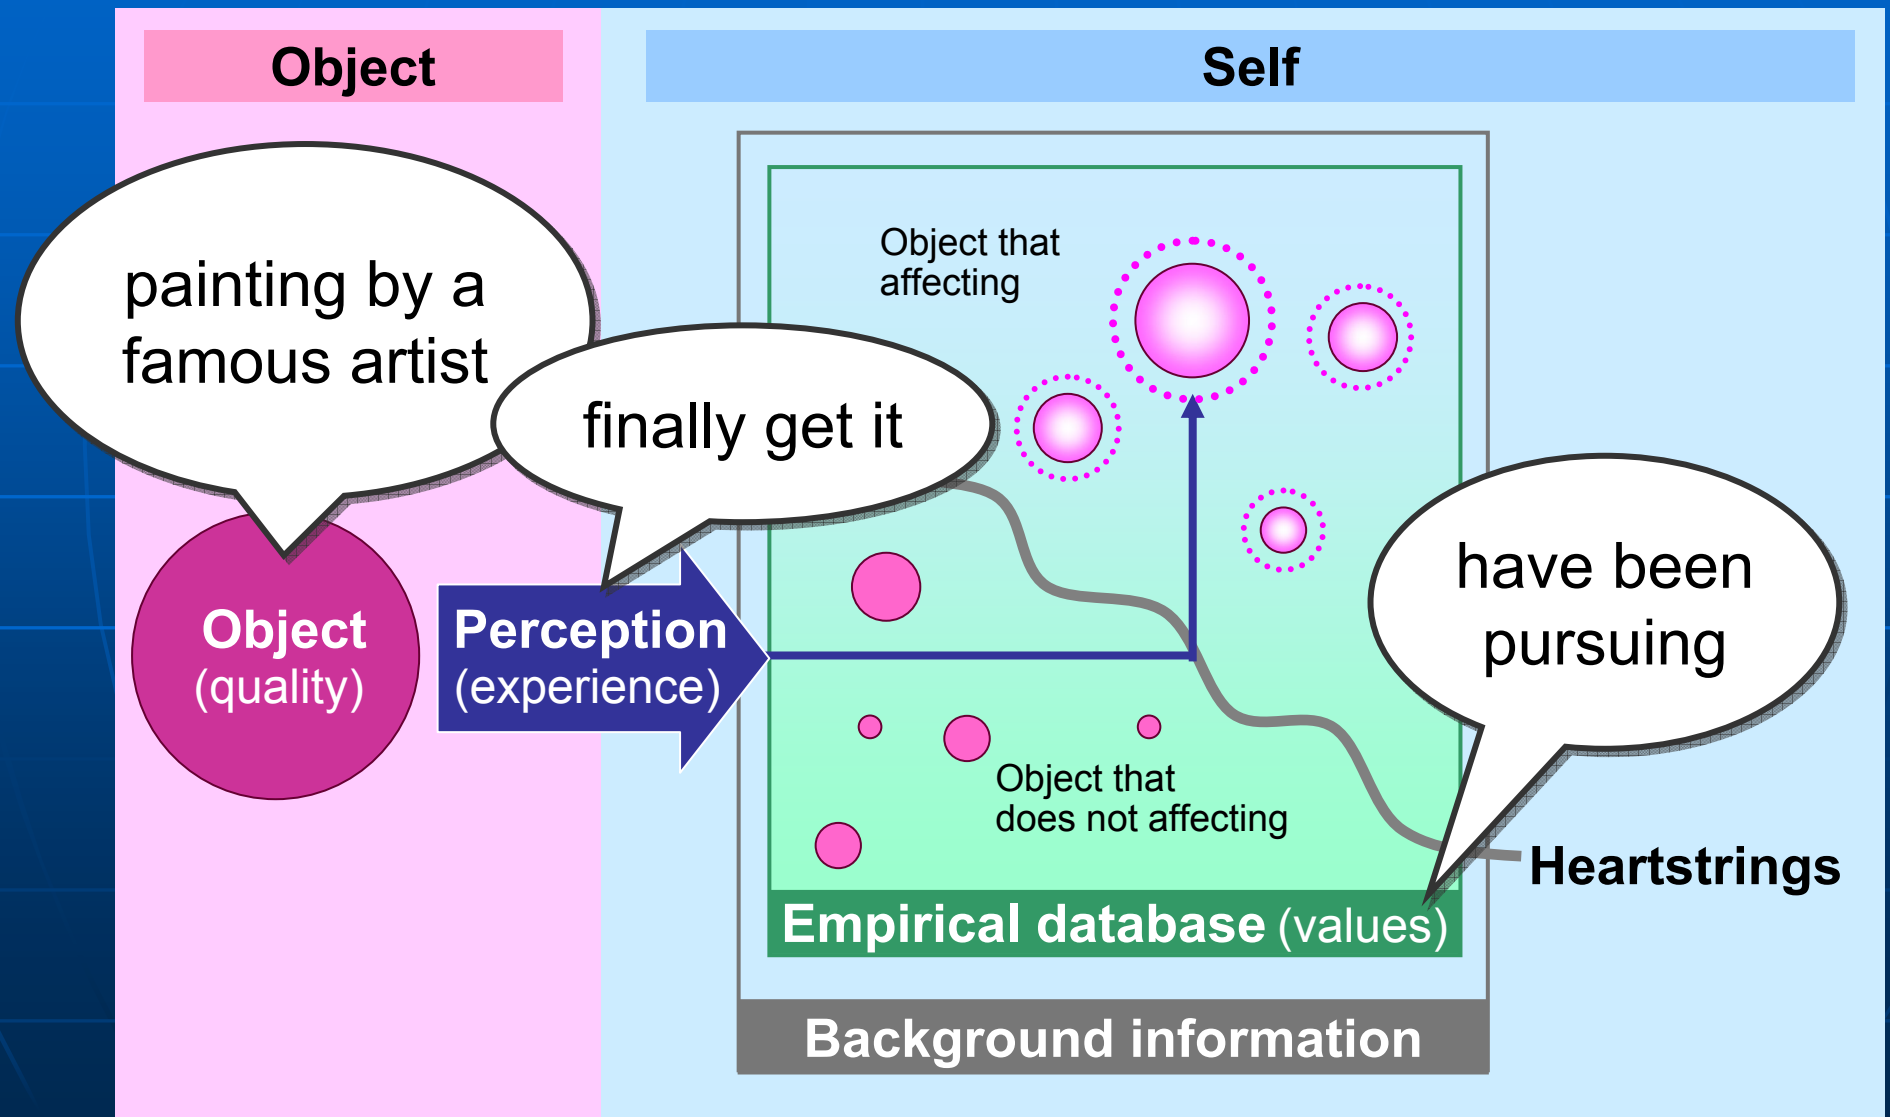

Elaboration of affecting experience elements

Selecting combinations of elaborated keywords that are prone to be affected

*AIM*

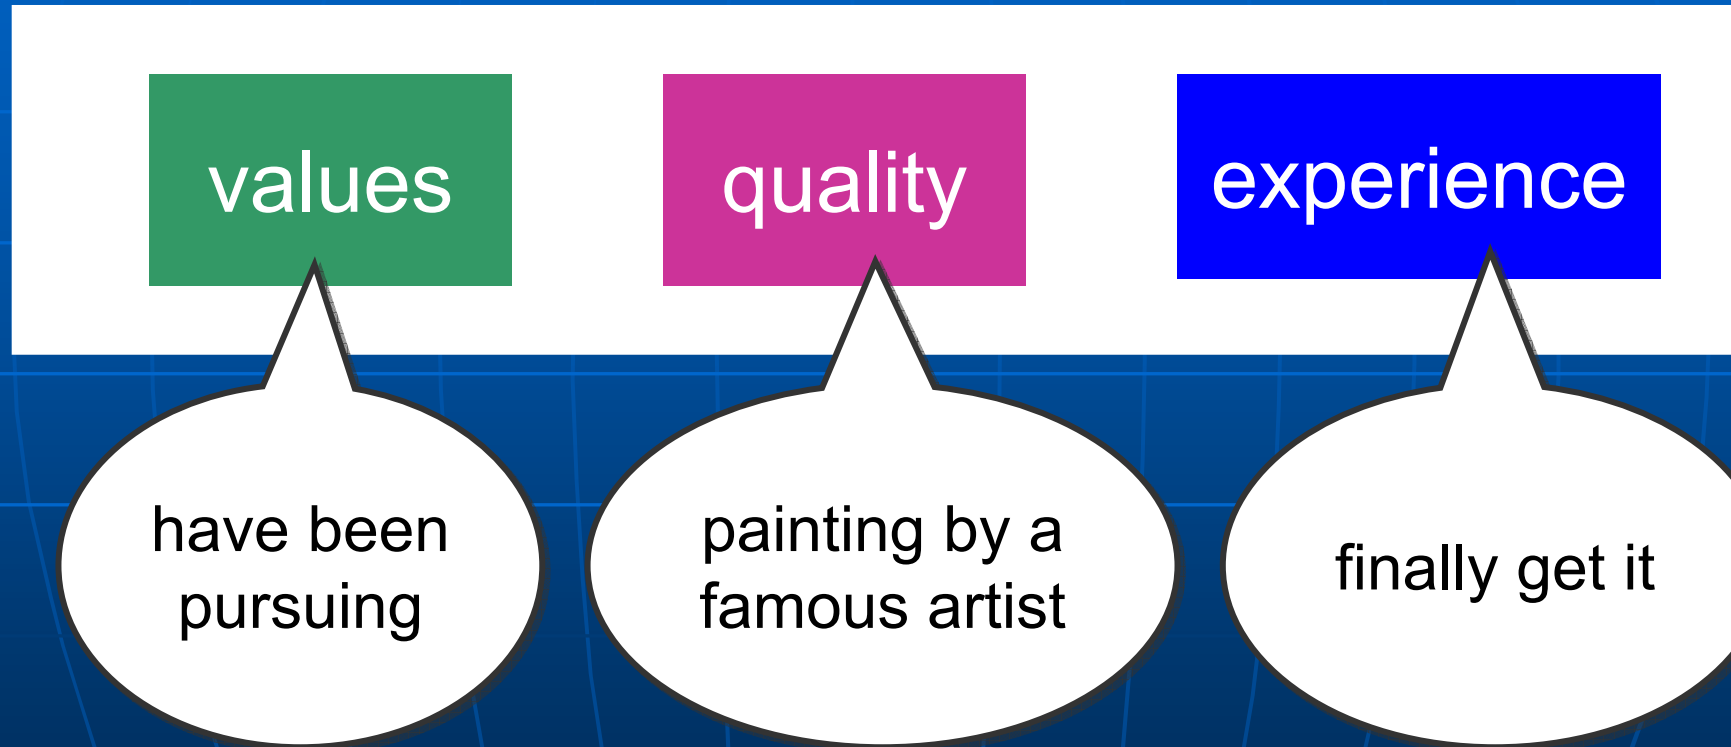

2. Devisal process of the AIM

# Modeling of affecting experience mechanism

## 2. Devisal process of the AIM

# Necessary elements for evoking affecting experience

## 2. Devisal process of the AIM

# Devisal process of the *AIM*

Modeling of affecting experience mechanism

```
graph TD; A[Modeling of affecting experience mechanism] --> B[Elaboration of affecting experience elements]; B --> C[Selecting combinations of elaborated keywords that are prone to be affected]; C --> D[AIM];
```

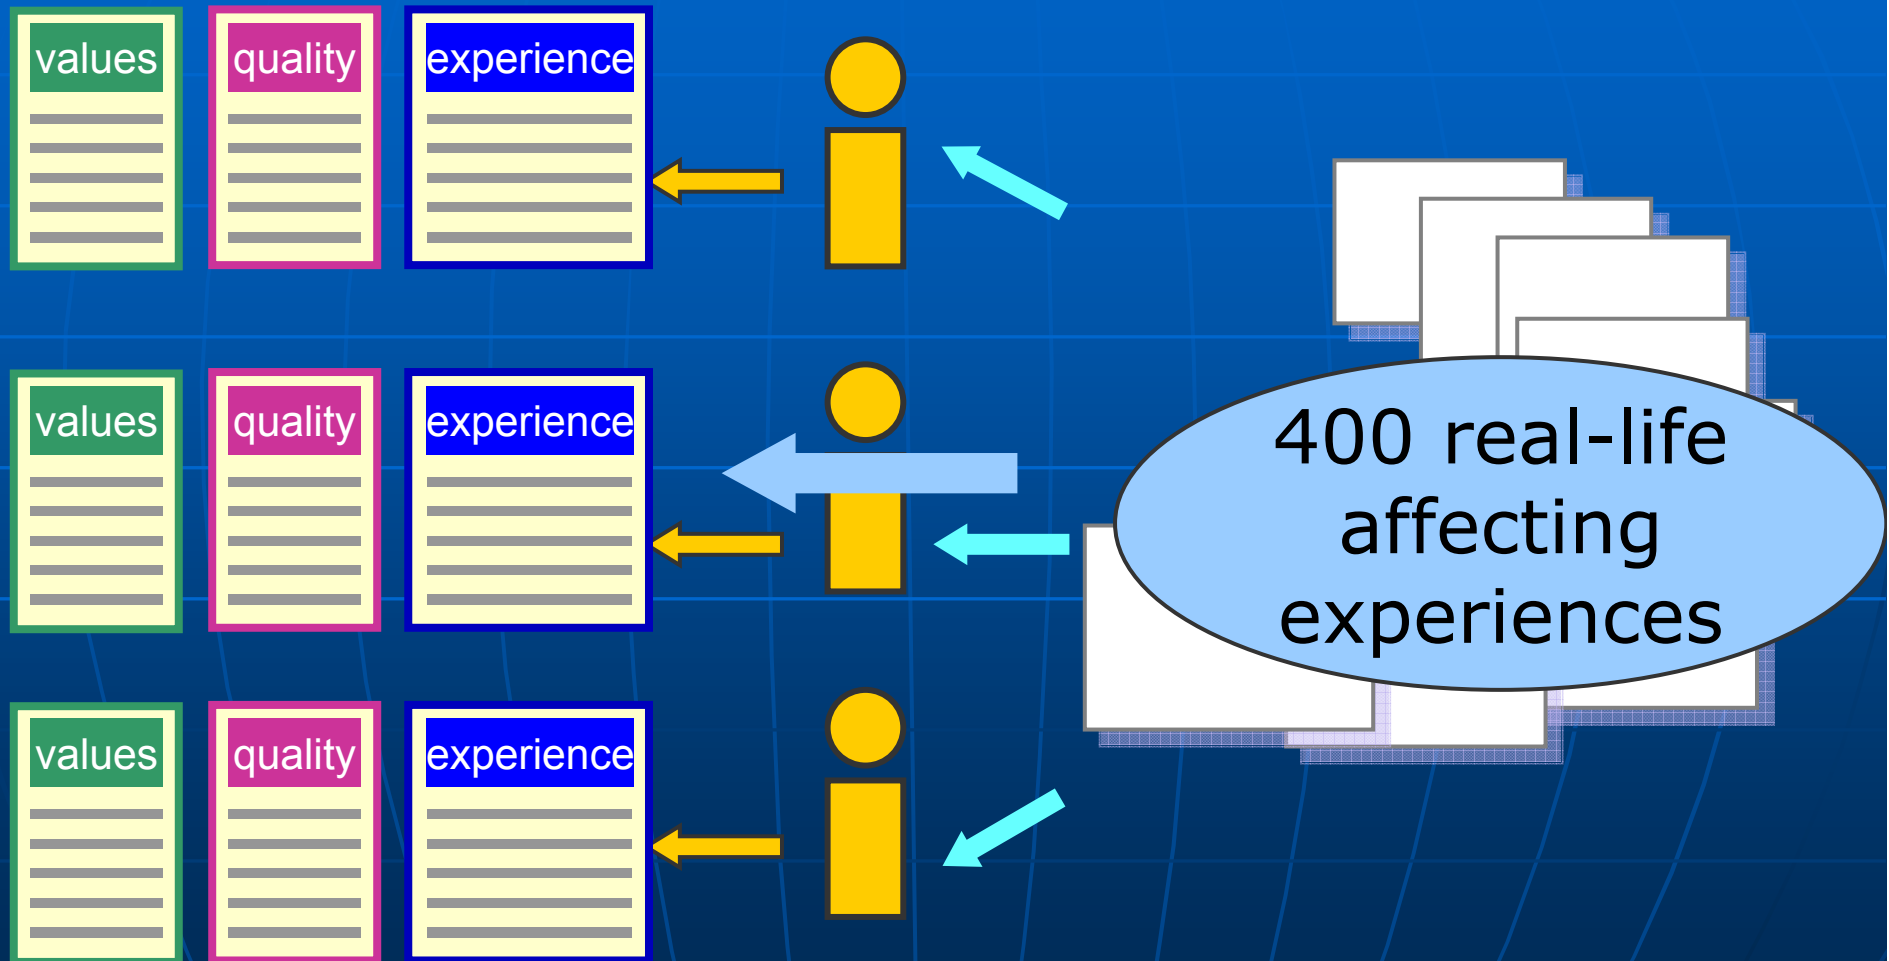

Elaboration of affecting experience elements

Selecting combinations of elaborated keywords that are prone to be affected

*AIM*

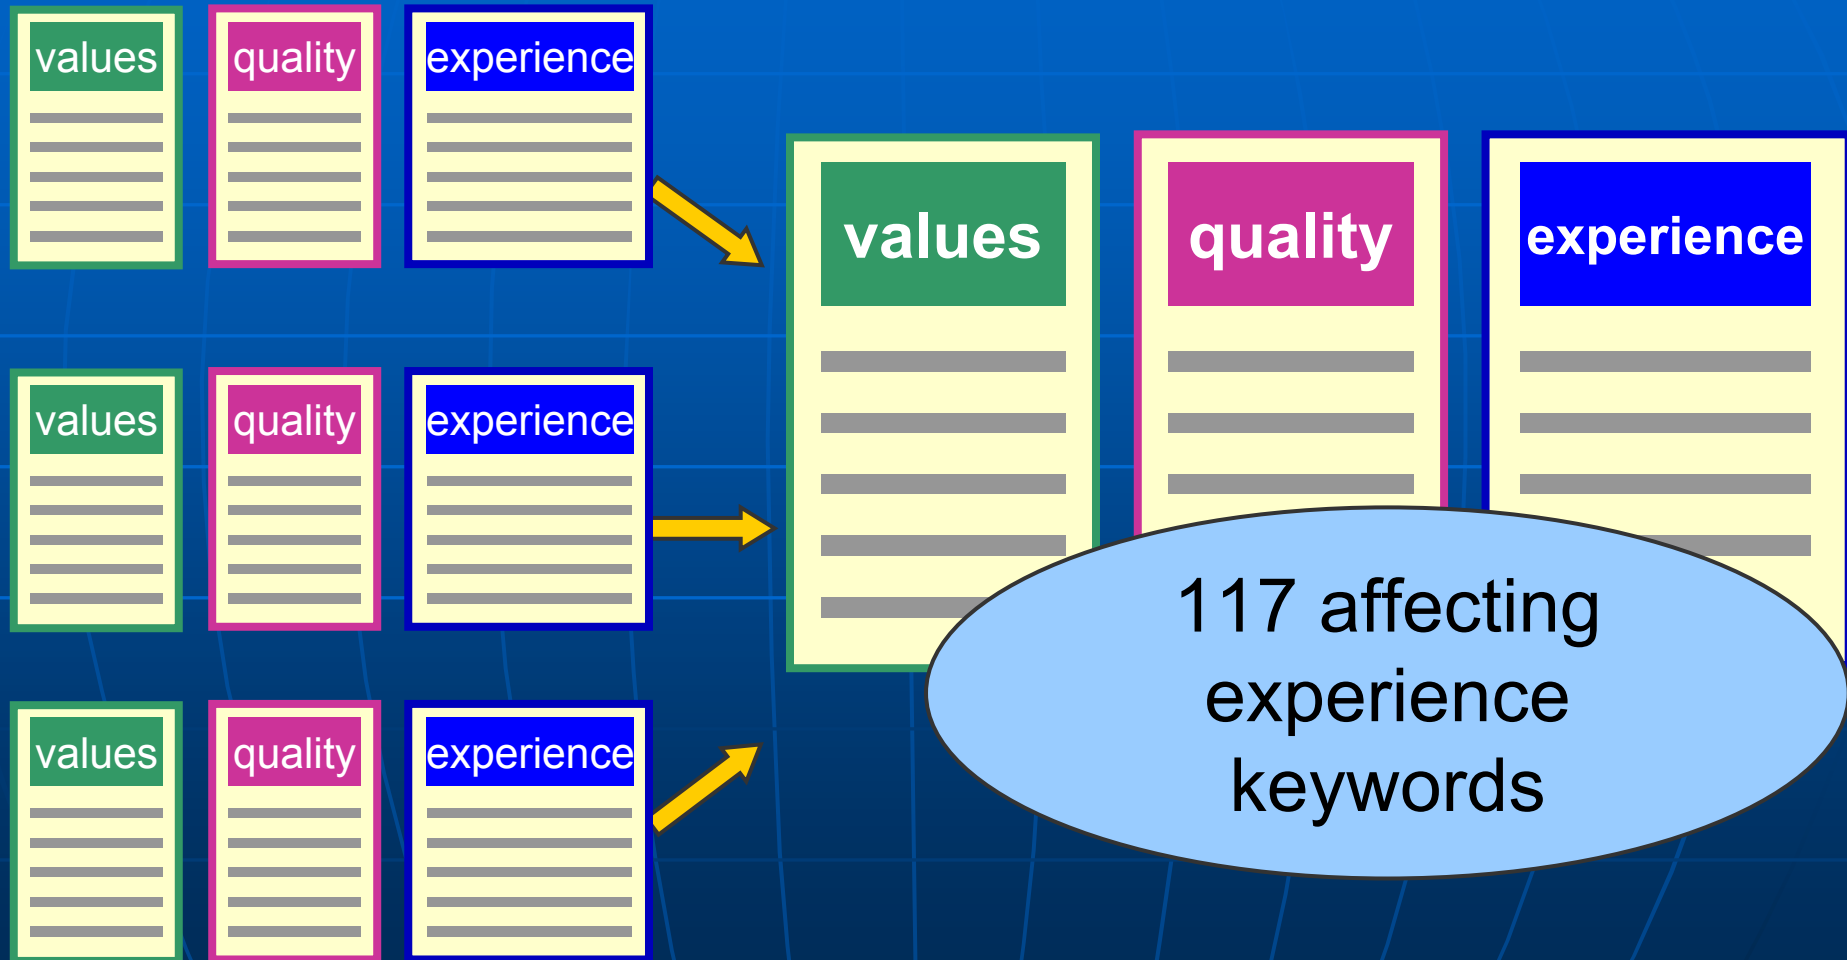

## 2. Devisal process of the AIM

# Selecting affecting experience elements

## 2. Devisal process of the AIM

# Elaborating affecting experience keywords

## Example of keywords

### values

have been pursuing

have had a special  
feeling for it

not expecting much

### quality

scarcity

beauty in nature

good quality of its  
material

### experience

finally get it

it was by accident

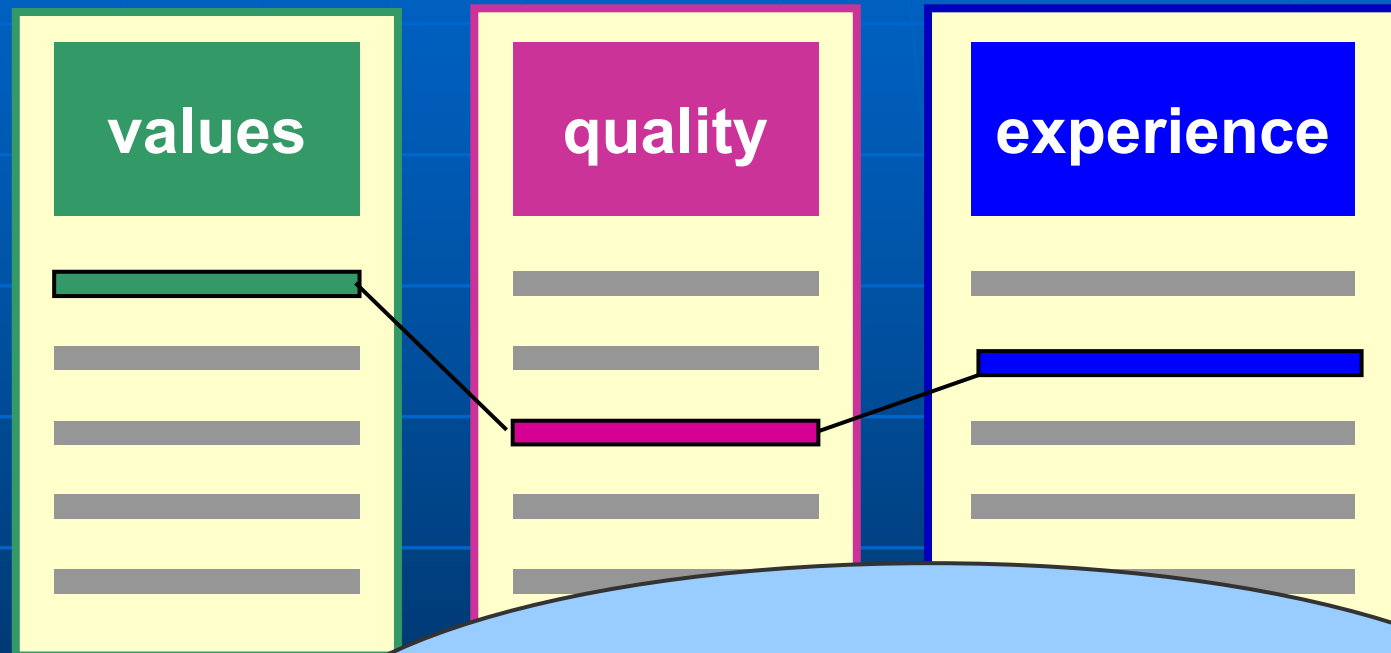

broadened my views

Versatile and  
accessible keywords

2. Devisal process of the AIM

# Combination of keywords that are prone to be affected

What combination of keywords would evoke affecting experience?

## Devisal process of the *AIM*

Modeling of affecting experience mechanism

```
graph TD; A[Modeling of affecting experience mechanism] --> B[Elaboration of affecting experience elements]; B --> C[Selecting combinations of elaborated keywords that are prone to be affected]; C --> D[AIM];
```

Elaboration of affecting experience elements

Selecting combinations of elaborated keywords that are prone to be affected

*AIM*

## 2. Devisal process of the AIM

# Allocation each affecting experience keyword

Affecting experience keywords

“0” or “1” was allocated according to whether each keyword is applied to each affecting experience example.

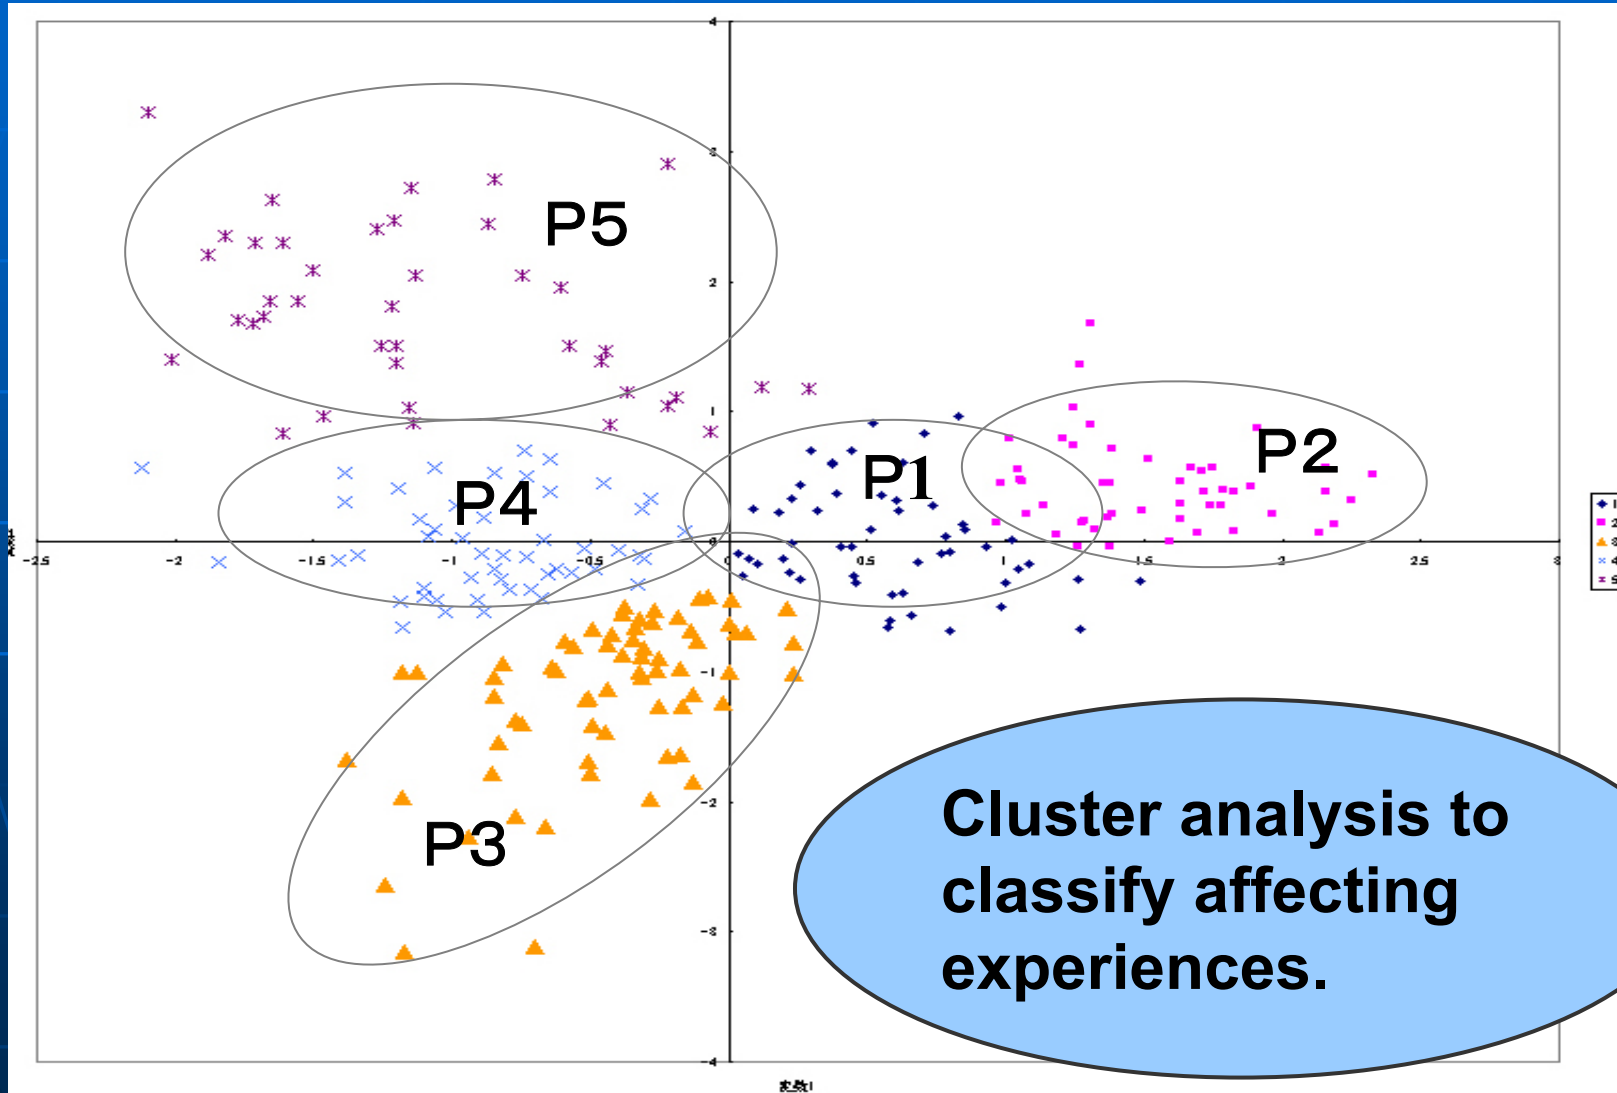

項目	内容	説明	キーワード	0	1	...	10
1	...	...	...	0	1	...	...
2	...	...	...	1	0	...	...
3	...	...	...	0	0	...	...
4	...	...	...	1	1	...	...
5	...	...	...	0	1	...	...
6	...	...	...	1	0	...	...
7	...	...	...	0	1	...	...
8	...	...	...	1	1	...	...
9	...	...	...	0	0	...	...
10	...	...	...	1	1	...	...

Users' affecting experience examples

Quantification Theory Type III was employed to figure out the strongly reacting axes.

# Classification of affecting experiences

## 2. Devisal process of the AIM

# Selection of keywords representative of each group

Figured out the keywords with a higher appearance ratio.

↑  
Three groups of affecting experiences

## 2. Devisal process of the AIM

# Consideration of idea expansion procedures

Two idea expansion sheets include idea expansion procedures.

感動商品開発のためのアイデア展開シート Ver. 6.00

**【シートA】 アイディアの素 展開シート** Name code : \_\_\_\_\_ Date : \_\_\_\_\_ Sheet No. : A - \_\_\_\_\_

**（アイデア展開の前提条件）**

展開ターゲット : \_\_\_\_\_ (例：カーナビ)      キーワードグループ : \_\_\_\_\_ (例：P7)

①キーワードを選ぶ (2分) → ②イメージを膨らませる (10分) → ③アイデアの素をつくる (15分) → ④プレストする (30分)

①キーワードを選ぶ (2分)  
「キーワードグループ」の中から、各カテゴリ（A～C）につき1つキーワードを選択。そのキーワードを選んでおきたい。

②イメージを膨らませる (10分)  
①で挙げたキーワードから連想するイメージを、「展開ターゲット」を想像しながら記述する。イメージが膨らまない場合は、「展開ターゲット」にこだわらずに展開したり、データベースを活用しても良い。

③アイデアの素をつくる (15分)  
②で展開したキーワードのイメージを一つずつ掛け合わせ、グッドストーリーになるように、1～2文字程度のアイデアの素を作成する。不足している要素があれば補充し、アイデアが何れも多少の発案を実現してもかまわない。具体的な機能やメリットが想定できていないレベルのもので良い。

④プレストする (30分)  
③で展開したアイデアの素をチームで発表し合い、お互いのアイデアを膨らませたり、方向性を修正したりする。

価値観	（展開ターゲット）× <input checked="" type="checkbox"/> 価値観 で連想するものは？	Idea No. (1)	MEMO
A	例：苦労してきた		
	例：使い方がわからなくなっていくにされてきた		
対象	（展開ターゲット）× <input checked="" type="checkbox"/> 対象 で連想するものは？	Idea No. (2)	
B	例：誰ができる		
	例：1ボタンでできる		
体験	（展開ターゲット）× <input checked="" type="checkbox"/> 体験 で連想するものは？	Idea No. (3)	
C	例：心地よかった		
	例：ほめられた		

例：カーナビ操作が苦手な人が、何度も間違っていた時、その間違い方のパターンから「もしかして〇〇機能？」という表示が出て、選択するだけ操作ができた。両乗者にほめられ、嬉しい気分になった。

感動商品開発のためのアイデア展開シート Ver. 6.00

**【シートB】 シナリオ展開シート** Name code : \_\_\_\_\_ Date : \_\_\_\_\_ Sheet No. : B - \_\_\_\_\_

⑤ アイディアを選ぶ (1分) → ⑥ タイトルをつける (1分)

このシートで展開するアイデアを一つ選び、そのアイデアが記載されているシートAを参照しながら、番号【IDEA-000】を記述する。

⑥で選んだアイデアにタイトルをつける。アイデアの特徴を端的に既したものが望ましい。

Name code	Date	Sheet No.	Idea No.
		- A	- ( )

例：NAME070223-AI-(1)

⑦ シナリオの条件を設定する (3分) → ⑧ シナリオを展開する (15分)

⑦で選んだアイデアのメリットや感動を再考するために、⑤においてシナリオを構築する。そのため、以下の項目を設定し、アイデアのメリットを整理する。

⑧で選んだアイデアをイメージするために、どのような状況でユーザーに感動を与えるのか、⑦で設定した条件をすべて物語形式で記述する。より具体的な背景や状況を記述し、読み手を引き込む工夫を行うことが望まれる。

登場人物：  
モノ・機能：  
シチュエーション：  
施しさ：

# 3. How to use the *AIM*

### 3. How to use the AIM

Targeting product to use the AIM:

*Car navigation system*

### 3. How to use the AIM

Select keywords:

values

*have been  
pursuing*

quality

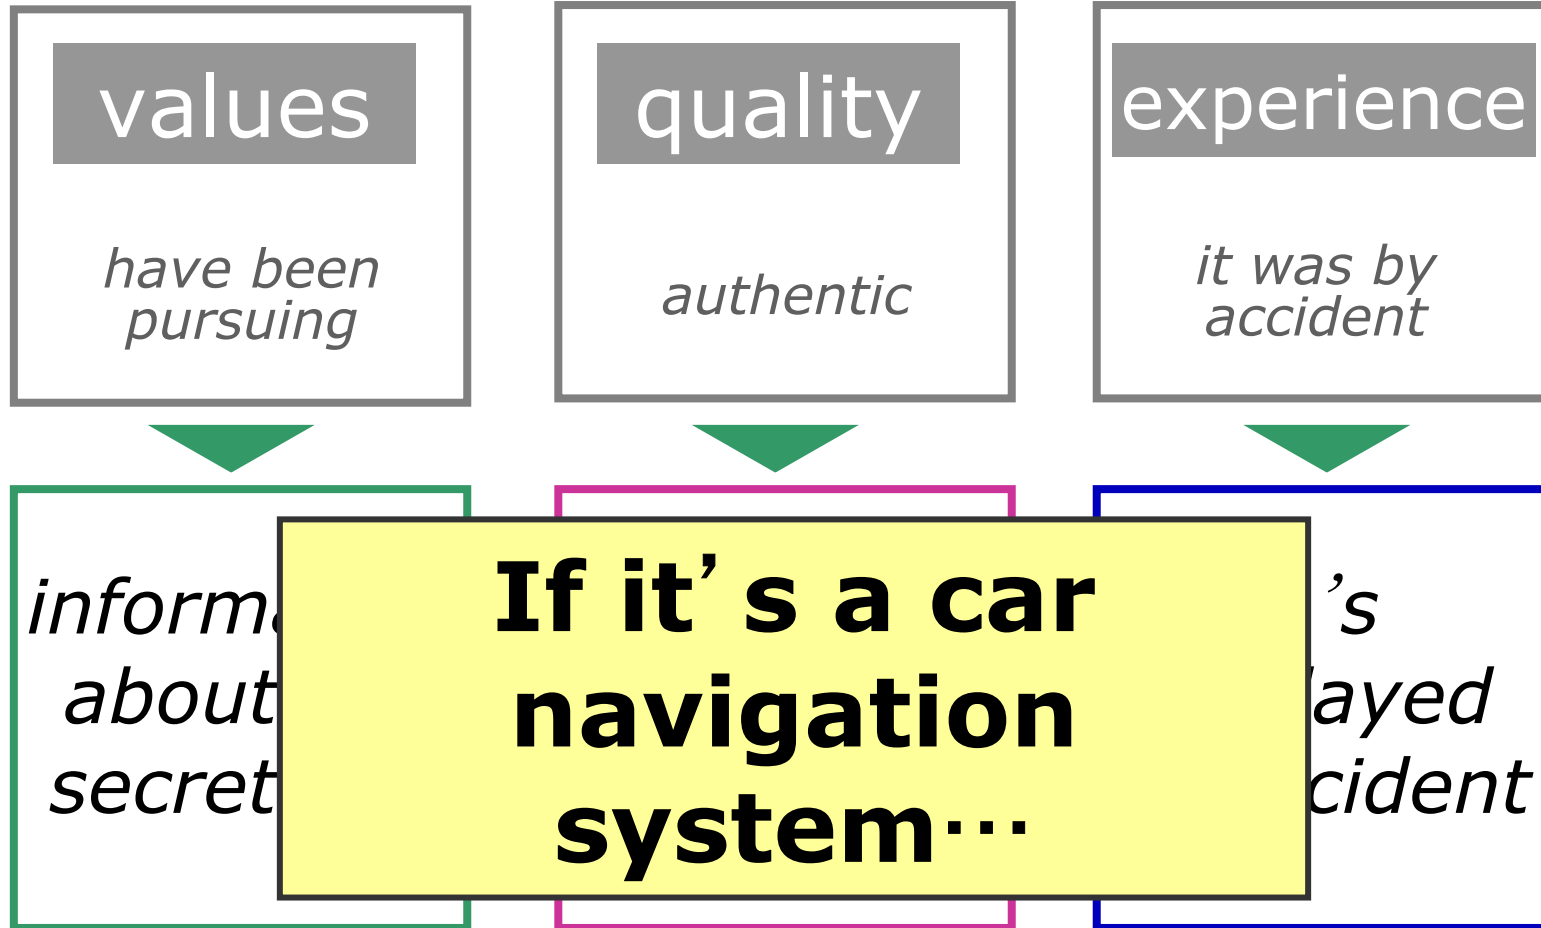

*authentic*

experience

*it was by  
accident*

### 3. How to use the AIM

Conjure up images:

### 3. How to use the AIM

Create seeds of ideas:

*if I*  
*n*  
*info*

**Create a good story  
by crossing the  
keywords**

*car*  
*e*  
*er.*

### 3. How to use the AIM

Entitle ideas:

*Superstar detecting  
car navigation system*

### 3. How to use the AIM

#### Develop scenarios:

*Michio, who is a big fan of major leaguer Ichiro, is going on a drive in Nagoya.*

*After a while, the car navigation system shows information about “the pork cutlet restaurant where Ichiro frequented when he was a student.” The pork cutlet which developed Ichiro’s strong shape is now available here. Michio forces himself to park the car, and enters the restaurant.*

# 4. Effects of the *AIM* and its future

## Effects of the *AIM*

1. Efficient development of products with affecting experience
2. High contingency of ideas
3. Visualization of the steps for idea expansion
  - Easier data administration
  - Possible to divide the works of idea expansion
4. Possible to expand ideas from user viewpoints

## Future development of the *AIM*

1. Clarification of characteristics of keyword patterns for affecting experiences
2. Idea expansion based on some other emotional experiences
3. Further refinement according to various purposes of its users'
  - Compile a database of expanded ideas
  - How to evaluate the expanded ideas

Thank you !
